

NICHOLAS HO

Full Stack Developer

Tangerang, Indonesia | +62 81904009193 | nikko150905@gmail.com | linkedin.com/in/nichoho | github.com/NichoHo

SUMMARY

Computer Science undergraduate and full-stack developer with 2+ years building production web applications and AI systems, spanning React/Next.js frontends, Go, C#/.NET and Laravel backends, and machine learning pipelines. Experienced leading small engineering teams through Agile sprints while personally architecting and shipping the underlying code.

WORK EXPERIENCE

Lead Developer | Nexus Software Development Agency

Oct 2025 – Present

- Build and ship high-performance landing pages for diverse clients using Next.js and Tailwind CSS, owning frontend development lifecycles across concurrent projects and directing UAT for on-time delivery.

Galva Group

Part-Time Full Stack Developer

Apr 2024 – Present

- Architected backend logic in VB.NET (ASP.NET Web Forms) for an enterprise Warehouse Management System (WMS), handling putaway/picking workflows and multi-warehouse hierarchies over a SQL Server / T-SQL data layer.
- Built "Kargolo," a React.js/TypeScript SPA with a .NET Core Web API backend (Repository Pattern + Dapper) for configuring and maintaining carrier networks, expedition shipping service options, and carrier contact details — a data-management admin panel for logistics infrastructure, not a live shipment tracker.

Full Stack Developer (Freelance)

May 2023 – Aug 2023

- Built an API-driven finance/inventory module (cash & bank disbursements, multi-currency exchange rates, automated double-entry General Ledger journals) with a C# (ASP.NET Web API) backend using the Repository Pattern and Dapper, and a Vue.js 3 SPA frontend styled with Bootstrap 5.

PROJECTS

Tally (Payments Ledger & Fraud Scoring) | Full Stack Developer

- Engineered a double-entry payments ledger in Go (gRPC + REST, PostgreSQL) with atomic transactions, idempotency keys, and ordered row locking, so retries and races never double-move money, verified by an invariant test suite and the race detector.
- Built an event-driven fraud pipeline (Kafka/Redpanda events consumed by a Python IsolationForest scoring service) and a Next.js dashboard, containerized with Docker.

Flux Budget App | Technical Lead & Developer

- Coordinated a team of 4 engineers through daily standups while personally architecting the Laravel backend, including automated background workers for recurring bills and budget-limit enforcement.

FaQ Assistant (RAG Pipeline) | Technical Lead & Developer

- Coordinated a team of 3 developers via standups while personally architecting a document-ingestion framework using LangChain for PDF parsing, with local semantic search via FAISS vector search for hallucination-free retrieval.

Jet Engine Health Monitoring System | Team Lead & ML Developer

- Led a 6-person team through a 16-week build while engineering RUL features from the NASA C-MAPSS dataset and tuning an XGBoost pipeline via Optuna optimization and SHAP explainability for a predictive maintenance dashboard.

EDUCATION

Computer Science (Global Class) | Binus University | GPA: 3.83 / 4.00

2023 – Present

Student Exchange Program | Sejong University, Seoul, South Korea | GPA: 4.40 /

Feb 2026 – Jun 2026

4.50 (98th percentile)

RESEARCH

Machine Learning Algorithms for HIV/AIDS Prediction using Explainable AI

ICORIS Conference, 2025

- Co-authored a study analyzing socio-behavioral data to detect HIV/AIDS, achieving 97% accuracy with Random Forest and XGBoost, using SHAP to enhance model transparency for clinical decision-making.

Hybrid MediaPipe-GRU Architecture for Efficient BISINDO Recognition

Undergrad Thesis, 2025–Ongoing

- Developing a lightweight spatial-temporal deep learning network (MediaPipe-GRU) optimized for low-resource environments, integrating non-manual markers.

CERTIFICATIONS

Alibaba Cloud Associate – Cloud Engineer (2025) NVIDIA Deep Learning Institute – Conversational AI (2025)

SKILLS

Software Engineering & Languages: Go, JavaScript, TypeScript, Java, C, C#, VB.NET, PHP, SQL, Node.js, Laravel, ASP.NET / .NET Core, Dapper, gRPC & REST API Design, Git

Backend Infrastructure & DevOps: PostgreSQL, SQL Server, MySQL, Kafka (Redpanda), Docker, Kubernetes, Terraform, GitHub Actions (CI/CD)

Frontend Development: React.js, Next.js, Vue.js, Redux Toolkit, Tailwind CSS, Bootstrap, jQuery

AI / Machine Learning: Python, Flask, TensorFlow, OpenCV, MediaPipe, Scikit-Learn, LangChain, FAISS Vector Databases, RAG Pipelines, Time-Series Analysis

Agile Collaboration: Agile/Scrum Ceremonies, Sprint Coordination, Cross-Functional Team Leadership, Requirements Gathering

Languages: English (IELTS 7.5), Indonesian (Native)
